

Waste Management

The Mustique Company created a comprehensive waste management strategy and has been actively improving recycling efforts since 2014.

Recycling

We sort our waste into recyclable, compostable and non-recyclable material. All of our recyclables are sent to All Island Recycling on St. Vincent, and our organic waste is composted and reused as fertilizer for our food and landscape gardens.

Wastewater treatment

There are various locations around the island where Waste Water Treatment Plants have been installed. They help to reduce run-off into the ocean which improves the water quality around the island. The treated water is used to irrigate our landscape gardens.
